J I

Summary

Reliable, honest and altruistic. A team player and all round good guy to have in the office. I'm also a great software developer. I'll fit into your team, always work to the best of my ability and do so whilst supporting others around me.

Skills

Server: .NET Core / 4.x, C# 6, MVC, Web api, Entity Framework, NUnit, Simple Injector, SQL Server, Microsoft Azure
Frontend: HTML5, CSS3, React.js, jQuery, Bootstrap, Webpack
Tools: Visual Studio 201x, Vs Code, Git

Experience

Software Developer at The Richmond Group
July 2014 - Present

Member of a development team of 3, tasked with developing and supporting new startup businesses. Worked mostly on individual projects, contributing to a microservices architecture. High pressure environment with very tight deadlines.

Accomplishments
- Twilio based call centre
- MVC registration portal & admin panel for managing property listings
- REST marketing service for pushing segmented customer data up to customer.io for email / text
- Added major enhancements to an existing CRM system built in React.js. Including adding a transaction viewing and posting interface.
- You can view my contributions to RG's open-source repositories here

Software Developer at BSS Digital
July 2014 - June 2015

Working alongside a senior developer, maintaining and enhancing the CMS used to build websites for LV, Rothesay Life and Bright Horizons. Other tasks included maintaining an MVC microsite for Halifax and a caseworking system built with Flask (Python web framework). I joined a thinly stretched team and had to hit the ground running.

Accomplishments
- Various enhancements to LV's platform (dynamic 500 page, custom CMS components).
- Carried out major platform upgrades on two large websites

Junior Developer at Interface 247
April 2012 - July 2014

Part of a small development team, working on software used within the business to serve leased vehicle drivers.
Initial role was non-technical. Was quickly moved into a data management role which progressed into full time development.

Accomplishments
- *Vmanage* inception / creation. Built to automate day to day tasks that had been my full time job. Webforms / SQL server project, bulk csv processing and data cleansing before loading into inhouse systems. The webforms layer was added so the system could be operated by a non-technical user.
- Development of My Goods Locker website. Built using webforms, .NET 4.0 and SQL Server. A home contents management solution.
- Development / roll out of My Goods Locker mobile application. Built using apache cordova and simultaneously released on Android and iOS. Valuable experience working with both major mobile vendors, and designing / building a mobile UI.
- Implementation of SharePoint 2010 intranet.

Education

Bournemouth and Poole College
National Diploma for IT Practitioners — 2004 - 2006

All encompassing IT course covering hardware, web, software, networking, security, etc. Some basic programming.
